[MOBI] Biology If8765 Answers

The human respiratory system consists of a pair of lungs and a series of air passages leading to the lungs. The entire respiratory tract (passage) consists of the nose, pharynx, larynx, trachea, bronchi, and bronchioles. Air enters the nose through the nostrils. When air passes through the nose, it is warmed, moistened and filtered.

Human Respiratory System and it's Mechanism (with diagram)

While the primary function of the respiratory system is gas exchange, this extensive organ system also has some other roles. In humans and other mammals, the respiratory system is integral creating sounds such as those used for speech. Structures of the upper respiratory tract, especially the larynx, are involved in the production of sound and can modulate pitch, volume, and clarity.

Respiratory ADVERTISEMENTS: b. Non-respiratory. a. Respiratory Function: It is to provide adequate volume of oxygen to the tissues. Normal person at rest needs about 250 ml of [...]

Functions of Respiratory System | Human Physiology

The remainder of the system is known as the systemic circulation. The graphic shows the major arteries (in bright red) and veins (dark red) of the system. Blood from the aorta passes into a branching system of arteries that lead to all parts of the body. It then flows into a system of capillaries where its exchange functions take place.
