Control Motivation And Social Cognition
The notion that control motivation plays a fundamental role in a variety of basic, social psychological processes also has a long historical tradition. A number of theorists (Heider, 1958; Jones & Davis, 1965; Kelley, 1967), for example, have suggested that causal inferences arise from a desire to render the social world predictable and controllable.

Self-efficacy reflects confidence in the ability to exert control over one's own motivation, behavior, and social environment. These cognitive self-evaluations influence all manner of human experience, including the goals for which people strive, the amount of energy expended toward goal achievement, and likelihood of attaining particular levels of behavioral performance.

Self-Efficacy Teaching Tip Sheet
Control Theory is the theory of motivation proposed by William Glasser and it contends that behavior is never caused by a response to an outside stimulus. Instead, the control theory states that behavior is inspired by what a person wants most at any given time: survival, love, power, freedom, or any other basic human need.
